DoD Spear-Phishing Awareness Training

Joint Task Force - Global Network Operations

Updated: 16 NOV 2006

Objective

- **Inform and increase the awareness of all Department of Defense personnel of the dangers and threats imposed on DoD information systems as a result of "spear-phishing" emails.**

- **Instruct personnel on how to recognize these email threats while offering methods to help counter the threat.**

Instructions

- To advance to the next slide, click the button

- Click to return to the previous slide.

- Click on the hyperlinked (blue, underlined) text to get more information on an item.

What is “Phishing”?

Phishing is a criminal activity using social engineering techniques.

“Phishers” attempt to fraudulently acquire sensitive information, such as passwords, personal information, military operations, and credit card/financial details, by masquerading as a trustworthy person or business in an electronic communication.

BUT, DID YOU KNOW……

Hidden Threats of "Phishing"

Phishing emails not only attempt to trick you into giving out sensitive information, but also can include malicious software.

What this means…

These emails may contain mini-programs that will be installed on your computer.

They may capture your keystrokes or capture your personal files and send them to people they shouldn't be going

Hidden Threats of "Phishing"

Most phishing attempts are for identity theft, but there is a rise in attempts at gaining access to online banking, federal, and defense information.

These hidden/unknown threats can capture your passwords/login credentials and also compromise unclassified, but yet sensitive, information that can put Department of Defense operations at

What is “Spear Phishing”?

Spear Phishing is a GREATER threat!!!

Spear Phishing is a highly targeted phishing attempt.

The attacker selectively chooses the recipient (target) and usually has a thorough understanding of the target’s command or organization.

What is “Spear Phishing”?

The attacker may:

- **Address the recipient by name**
- **Use lingo/jargon of the organization**
- **Reference actual procedures, SOPs/TTPs, or DOD Instructions**

The email may appear very genuine. Sometime these emails have legitimate operational and exercise nicknames, terms, and key words in the subject and body of the message.

Common Examples of Phishing

Phishing is not anything new and many of you may have seen examples in emails from your personal / at-home accounts.

If you choose to ignore our request, you leave us no choise but to temporaly suspend your account.

Thank you for using PayPal! The PayPal Team

Please do not reply to this e-mail. Mail sent to this address cannot be answered. For assistance, log in to your PayPal account and choose the "Help" link in the footer of any page.

To receive email notifications in plain text instead of HTML, update your preferences here.

PayPal Email ID PP697

Protect Your Account Info

Make sure you never provide your password to fraudulent persons.

PayPal automatically encrypts your confidential information using the Secure Sockets Layer protocol (SSL) with an encryption key length of 128-bits (the highest level commercially available).

PayPal will never ask you to enter your password in an email.

For more information on protecting yourself from fraud, please review our Security Tips at http://www.paypal.com/securitytips

Protect Your Password

You should never give your PayPal password to anyone, including PayPal employees.

- **You may have seen emails that appear to come from your bank or other online financial institutions.**

Commonly Seen Commercial Examples:

eBay, PayPal, all banking and financial institutions

Should I be worried?

YES, this is occurring within DOD

The attacker's primary focus is to get you to open an attachment or follow a web link. These actions may install the malicious software.

Most spear phishing attacks within DOD are not for identity theft.

Who should be worried?

Everyone within DOD is a target.
Attempts have been seen at all levels and areas.

Military, Civilians, Contractors
All Ranks
All Services
All Geographic Locations

Discovered “spear phishing” messages within the DOD can be *very* convincing

Recognition

- **"From" field of an email can be easily faked (spoofed).**
  - **It might appear completely correct, or have a similar variation.**
    account_security@mypay.com

- **On the other hand, the message may come from a**
  - **legitimate email account, because that account has been compromised.**
    john.smith.yourboss@yourbase.mil

This can occur when the attackers obtain someone's login credentials and email contacts in their address book in order to obtain more accounts.

Recognition

Other recognition factors of phishing attempts:

1) **Generic Greeting**
2) **Fake Sender's Address**
3) **False Sense of Urgency**
4) **Fake Web Links. Deceptive Web Links. Email is requiring that you follow a link to sign up for a great deal, or to log in and verify your account status, or encourages you to view/read an attachment.**
5) **Emails that appear like a website**

Recognition (Example 1)

Sanitized example of a message with a link to a website that installs malicious software.

DO NOT OPEN THE ATTACHMENT IF YOU RECEIVE A SIMILARLY COMPOSED EMAIL

Prevention (as a receiver)

Be cognizant and vigilant of this threat.

Before clicking on any weblink within a message or opening up an attachment, be sure the source of the email is legitimate.
Is it digitally signed?

The links and attachments can contain malware, spyware, viruses, and trojan horses.

If you click on these illegitimate links ments

Prevention (as a sender)

At a minimum,
Digitally Sign All E-mails?

If your position involves official direct email contact with outside DoD entities,
digital signatures might not be an option.

If this is the case, be suspect of the format and enclosed attachments with these individuals.

Prevention (as a sender)

Note on Operations Security (OPSEC)

Users should digitally sign and encrypt all messages that contain: (at a minimum)

- **For Official Use Only (FOUO)**
- **Privacy Act / personal information**
- **technical and contract data**
- **proprietary information**
- **foreign government information**
- **financial information**
- **source selection information**

Prevention (as a sender)

Do not send emails using "*HTML*" formatting.

Use "*Plain Text*" or "*Rich Text*" formatted emails.

"*Plain Text*" (or ASCII) is preferred because Rich Text looks the same as HTML formatting.

How do I set this up?

Digital Signing

The importance of digitally signing your messages can't be stressed enough.

To date, there are no known "spoofs" to digital signatures, other than compromised PKI credentials due to negligence.
